State incident occurred

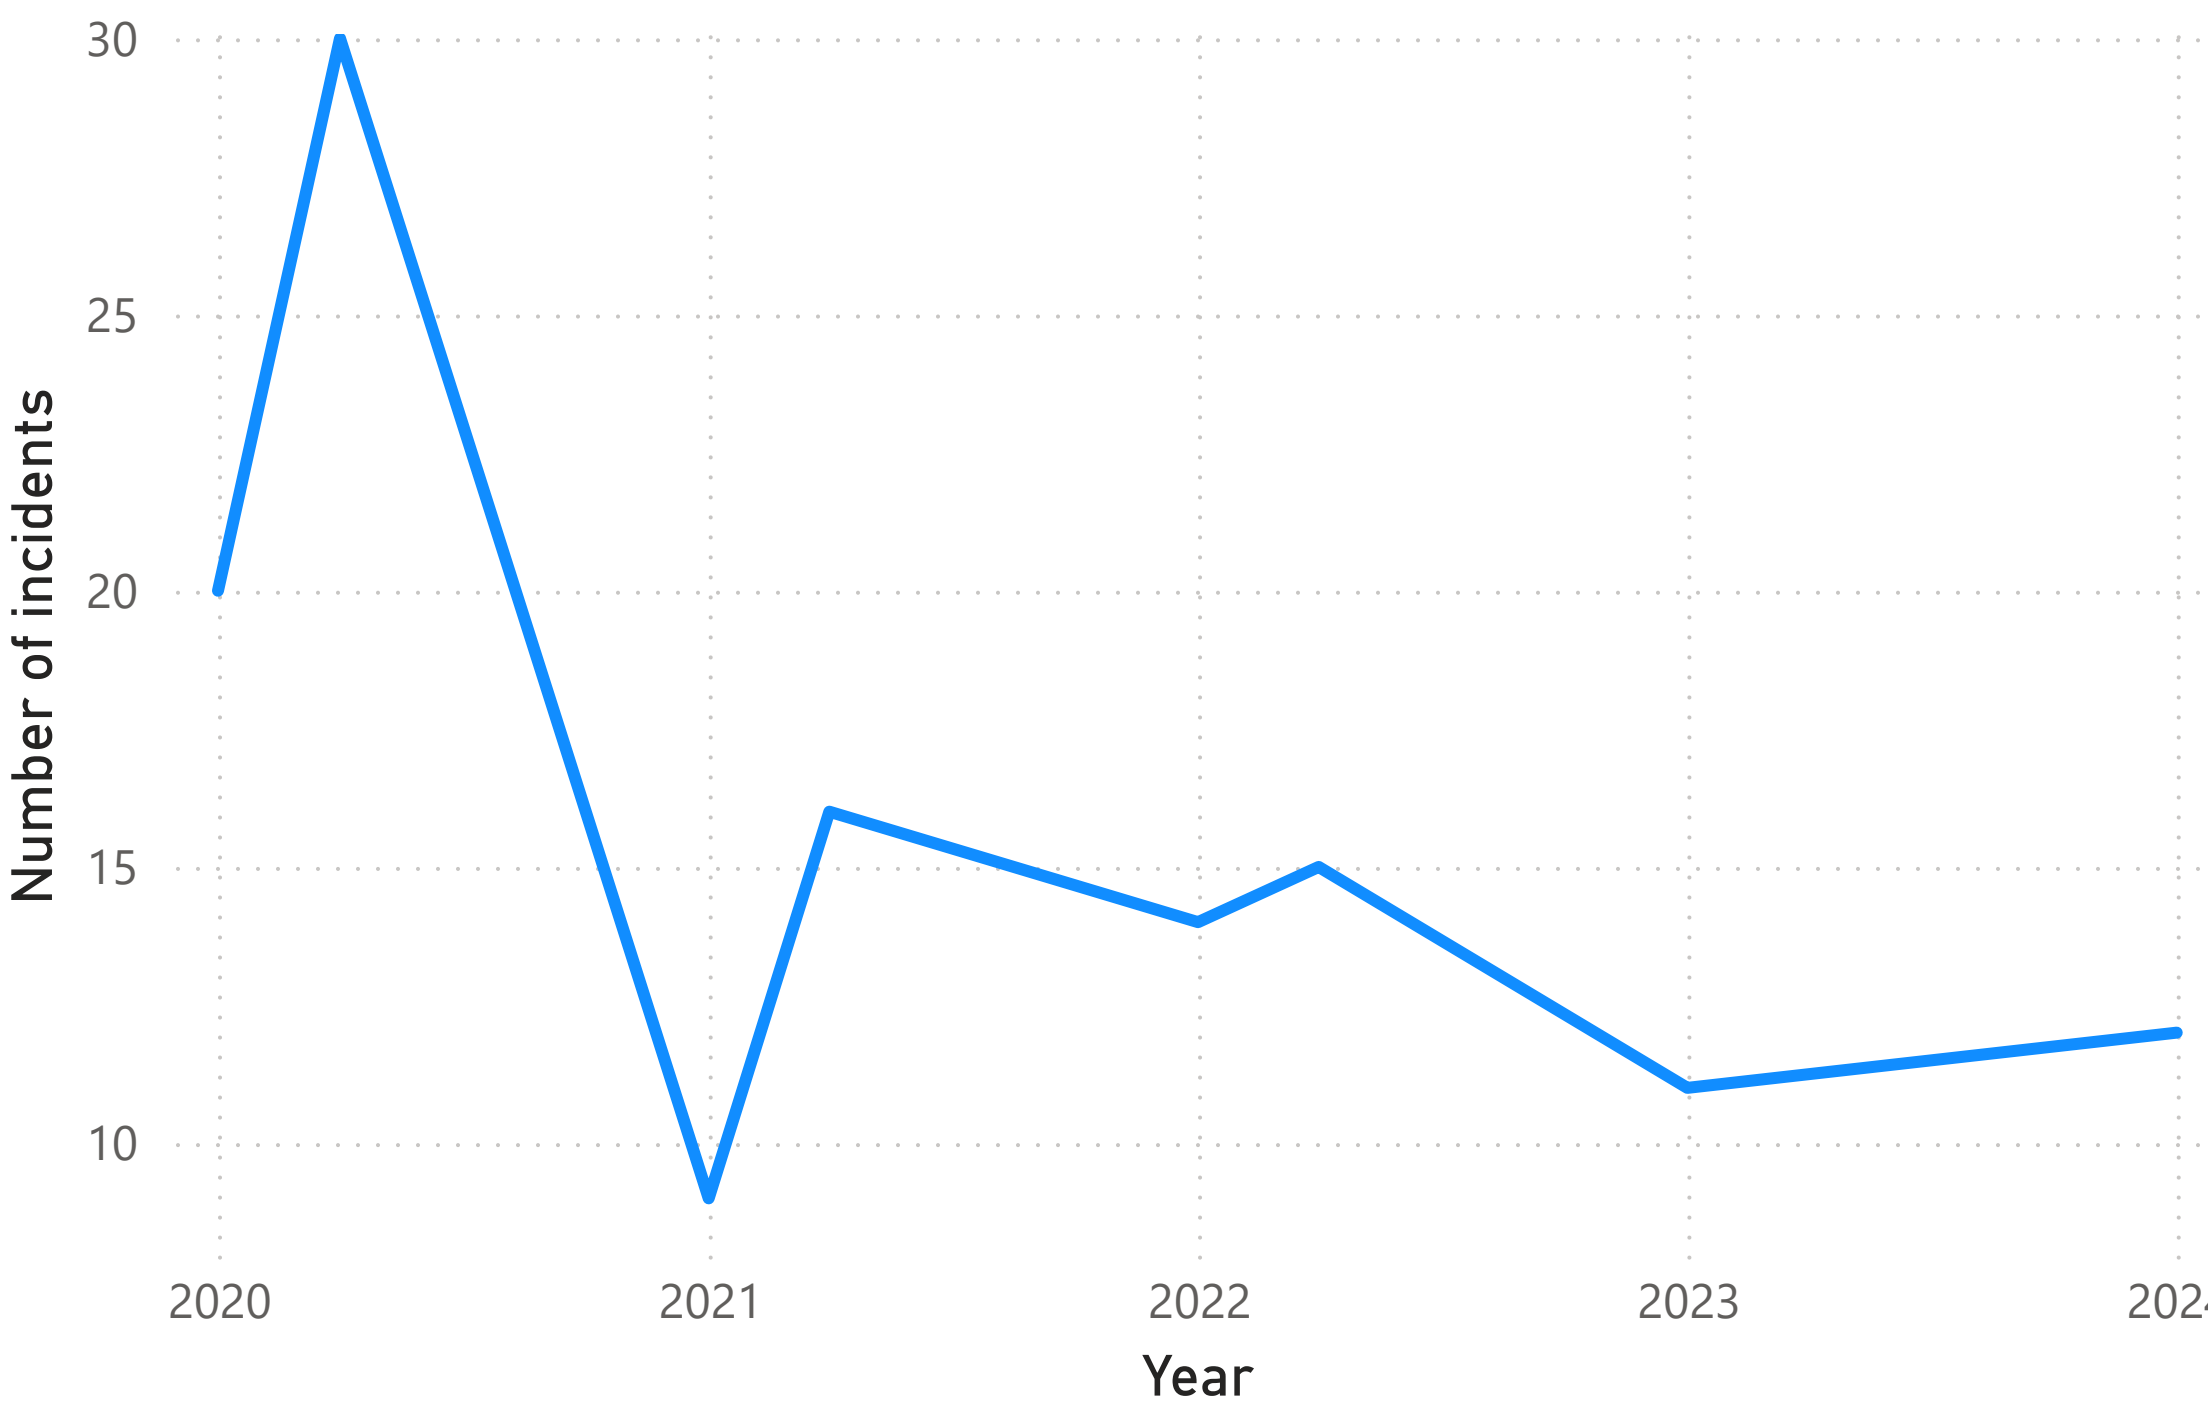

General analysis

A general analysis of data from Australia and the United Kingdom highlights trends in agricultural incidents, with a focus primarily on fatalities. Both countries show a downward trend in the number of incidents over recent years. In Australia, states like NSW and QLD recorded the highest numbers, while in the UK, the South West and Wales had the most incidents. Notably, ATVs, quad bikes, and tractors were the most common machinery involved in incidents across both countries.
